Family Owned & Operated For Over 37 Years * Licensed & Bonded

- SEPTIC SYSTEMS CLEANED • PUMPED • REPAIRED • INSTALLED
- PORTABLE TOILET RENTALS •
- SEPTIC INSPECTIONS •

IMPORTANT INFORMATION CONCERNING YOUR SEPTIC SYSTEM

1. Become familiar with the location of the septic tank and all the components of your septic system.
2. Do not allow motor vehicles to drive over any part of your underground system. The underground pipes could be crushed or broken which could stop the operation of your system.
3. Do not plant trees or shrubs near the system. Their roots could enter the pipes within the system and clog them.
4. Do not overload your septic system. For best service, cooking oils and grease should be disposed of with the garbage. If these substances are poured into the kitchen sink they tend to cause problems since they harden in the sewer pipes and increase the scum layer in the septic tank.
5. Do not allow any non-biodegradable materials to enter your septic system. Oil grease, disposable diapers, cigarette filters, plastic products, personal items, etc. should never enter your septic system. These items do not decompose and often clog the pipes of the septic system.
6. Failure to clean the septic tank when it is needed will allow solids and scum to pass into the drain field or seepage pits. Solids and scum can clog the seepage area and force sewage to the surface of the ground. This creates a hazard to the health of your family and neighbors. When the septic system fails, sinks and toilets will not drain properly.
7. Flushing chemicals or yeast into the system will not reduce the solids in the tank. **THIS IS NOT A SUBSTITUTE FOR CLEANING!** After the septic tank is cleaned we recommend our septic additive to be placed into the tank. This will reactivate the bacteria process in the septic tank.
8. Neglecting your septic system or having it cleaned improperly can be very expensive to repair. The money saved by lack of maintenance is lost very quickly when you must repair or replace your septic system. It should be noted that the septic tank should be cleaned every one or two years depending on the usage of your particular septic tank.

IF YOU HAVE ANY QUESTIONS OR WOULD LIKE TO SCHEDULE AN APPOINTMENT TO HAVE YOUR SEPTIC TANK CLEANED PLEASE CALL ONE OF THE TELEPHONE NUMBERS LISTED IN THE HEADING.
